

Lara Srinath

SUMMARY

Lara Srinath is a Master Anaplanner and Solution Architect with over ten years of experience delivering, optimizing and supporting Anaplan solutions across Supply Chain and Finance functions. He specializes in solution architecture, platform operations, governance, data integration, and continuous improvement for enterprise planning ecosystems. Lara has led cross-functional teams, managed production planning platforms supporting business-critical processes and partnered with executive stakeholders to deliver scalable, secure and high-performing planning solutions. His expertise spans demand planning, supply planning, inventory optimization, FP&A, workforce planning, and enterprise data integration.

KEY ACHIEVEMENTS

- Managed and supported 25+ Anaplan models and serving 500+ users across Supply Chain and Finance functions
- Led teams of up to 8 direct reports and 15 cross-functional project resources
- Delivered planning solutions across FMCG, Retail, Energy, Chemical and Manufacturing industries
- Maintained 99% platform availability while reducing support ticket volumes by 25% over various projects
- Oversaw 15+ enterprise integrations utilizing Anaplan Connect and certificate-based authentication
- Reduced model open and calculation times by up to 80% through architecture and performance optimization initiatives

SKILLS

Enterprise Planning Platforms: Anaplan (Classic, Polaris, ALM, Data Hub, CloudWorks, Optimizer), Pigment

Planning Processes: Demand Planning, Supply Planning, Inventory Optimization, DRP, MRP, MPS, S&OP, Revenue Planning, Workforce Planning, OPEX Planning, Cost Centre Planning, FP&A

Platform Operations: Platform Governance, Production Support, Release Management, Security Administration, Selective Access, SOX Controls, Continuous Improvement

Data & Integration: Anaplan Connect, Certificate Authentication, Data Integration, ETL, Data Governance, Enterprise Integrations

Leadership: Technical Product Ownership, Stakeholder Management, Team Leadership, User Story Development, Requirements Management

Technical: Python, R, Statistical Forecasting, Data Analytics

EXPERIENCE

Manager – Anaplan Delivery

Nov 2025 – Present

GenXAI Analytics

United States

- Lead platform support, enhancement delivery and governance activities across enterprise Anaplan and Pigment planning solutions.
- Partner with business stakeholders to define requirements, develop user stories, prioritize enhancements and manage delivery of planning platform improvements.
- Drive access management and governance initiatives to support SOX compliance, strengthening security controls, auditability and segregation-of-duties processes.
- Oversee production support activities, issue triage, root-cause analysis and resolution planning to ensure platform stability and user adoption.
- Manage development teams delivering planning solutions across Supply Chain and Finance functions while establishing modelling standards and implementation best practices.
- Collaborate with business, IT and audit stakeholders to align planning platform capabilities with operational and compliance requirements.

- Support enterprise access governance initiatives for Pigment and planning platforms, ensuring compliance with audit and SOX control requirements.

Senior Solution Architect
Vuealta Consulting

May 2021 – Oct 2025
Singapore

- Led the design, implementation and support of enterprise Anaplan solutions across Supply Chain and Finance functions, partnering with business stakeholders to translate strategic objectives into scalable planning solutions.
- Supported and enhanced a portfolio of 10+ production Anaplan models serving 75+ planners, managers and business leaders across demand planning, supply planning, inventory management, revenue planning, workforce planning, operating expense planning and cost center planning.
- Managed enhancement requests, defects and continuous improvement initiatives, reviewing and prioritizing 10–15 monthly support tickets while ensuring alignment with business priorities and operational objectives.
- Partnered with Directors, CIOs, Heads of Demand Planning and Heads of Supply Planning to drive planning transformation initiatives, improve business processes and increase platform adoption.
- Led production release activities including deployment planning, regression testing coordination, cutover support and post-release validation while leveraging Anaplan ALM to maintain controlled Dev, Test and Production environments.
- Improved platform performance and user experience by reducing model open times and calculation runtimes by up to 80%, maintaining 99% platform availability and reducing support ticket volumes by 25%.
- Governed model security and access controls including role-based access, selective access and data governance standards to ensure compliance, auditability and data integrity.
- Led the Data Integration team responsible for extracting, transforming and loading enterprise data into Anaplan from multiple source systems.
- Oversaw 15+ enterprise integrations utilizing Anaplan Connect, certificate-based authentication and scheduled data pipelines, ensuring secure and reliable end-to-end planning processes.
- Managed teams of up to 8 direct reports and 15 cross-functional project resources, overseeing recruitment, onboarding, performance management, career development and conducted performance reviews, made hiring recommendations, supported promotions.
- Owned the full project lifecycle from discovery and requirements gathering through solution design, build, testing, deployment, hypercare and production support.
- Implemented multi-echelon inventory optimization, replenishment planning, master production scheduling and material replenishment planning using Anaplan Optimizer to improve planning accuracy and operational efficiency.
- Leveraged Anaplan Polaris and Standard Supply Chain Applications to develop client demonstrations, proof-of-concepts and solution accelerators showcasing enterprise planning capabilities.
- Organized and delivered technical knowledge-sharing sessions and established modelling best practices across consulting teams.

Selected Enterprise Planning Transformations

- Del Monte (Beverage & Culinary): Led implementation of statistical forecasting and extended planning horizons from 3 to 24 months, reducing planning cycles from 3 weeks to 1 week. Integrated DRP, MPS and MRP into a unified planning platform enabling real-time collaboration across depot planners, production schedulers and material planners while integrating execution processes with SAP.
- Wilmar Europe (Oils & Chemicals): Implemented contract-driven demand planning and integrated supply planning processes covering production, purchasing, stock transfers and international imports. Enabled vessel scheduling, tank inventory management and production capacity planning to support feasible end-to-end supply chain plans.

Consultant/Analyst**Deloitte Consulting Southeast Asia***Aug 2018 – Apr 2021**Philippines & Malaysia*

- Designed and delivered enterprise planning solutions covering demand planning, inventory planning, procurement planning and financial material planning for multinational clients.
- Built forecasting solutions leveraging statistical algorithms, outlier detection, manual overrides and demand history correction processes.
- Delivered demand and inventory planning solutions for Tenaga Nasional Berhad across Distribution, Generation and Corporate business units during a 12-month transformation program.
- Implemented BOM-driven material planning and financial planning processes for Denka Chemicals, including actual versus budget variance analysis supporting operational and finance teams.
- Facilitated discovery workshops with senior business stakeholders, translating requirements into scalable Anaplan solution designs and business process improvements.
- Led data preparation, transformation and integration activities, utilizing R for data cleansing, aggregation and advanced analysis prior to Anaplan implementation.
- Designed scalable DISCO-based model architectures and planning frameworks supporting future growth and maintainability.
- Conducted sprint reviews, UAT coordination, end-user training and solution documentation to ensure successful adoption and sustainable support models.
- Served as a member of Deloitte's Core Anaplan Delivery Team supporting multiple enterprise implementations across diverse industries.

Anaplan Developer**Solvanni Technologies***Jul 2016 – Jun 2018**India*

- Designed, developed and published an Inventory Planning application to the Anaplan App Hub.
- Transformed Excel-based planning processes into scalable, multi-dimensional Anaplan solutions improving planning accuracy and operational efficiency.
- Implemented ALM-based deployment practices across Development, Test and Production environments.
- Optimized model performance through sparsity reduction, architecture improvements and calculation efficiency enhancements.
- Developed dashboards, reporting solutions and role-based access controls supporting planners and business leadership.

OPEN SOURCE PROJECT**Anaplan MCP Server**

- Built and open-sourced an MCP (Model Context Protocol) server that connects AI assistants directly to Anaplan through a standards-based MCP interface.
- Enables business users to prepare routine reports, model builders to explore model structure and trace dependencies and IT teams to run imports/exports, manage list data and automate workflows all through natural language conversation.
- Supports all Anaplan authentication methods (Basic, Certificate, OAuth2)
